# Baseline Survey & Report on Health, Hygiene & Sanitation: Delhi - Urban Slums and Villages

*Lets participate in making Earth: Clean & Green*

By  
SulabhENVIS Centre,  
Sulabh International Institute of Health & Hygiene (SIHH)  
Patronised by Ministry of Environment & Forests, Govt. of India

## CONTENTS

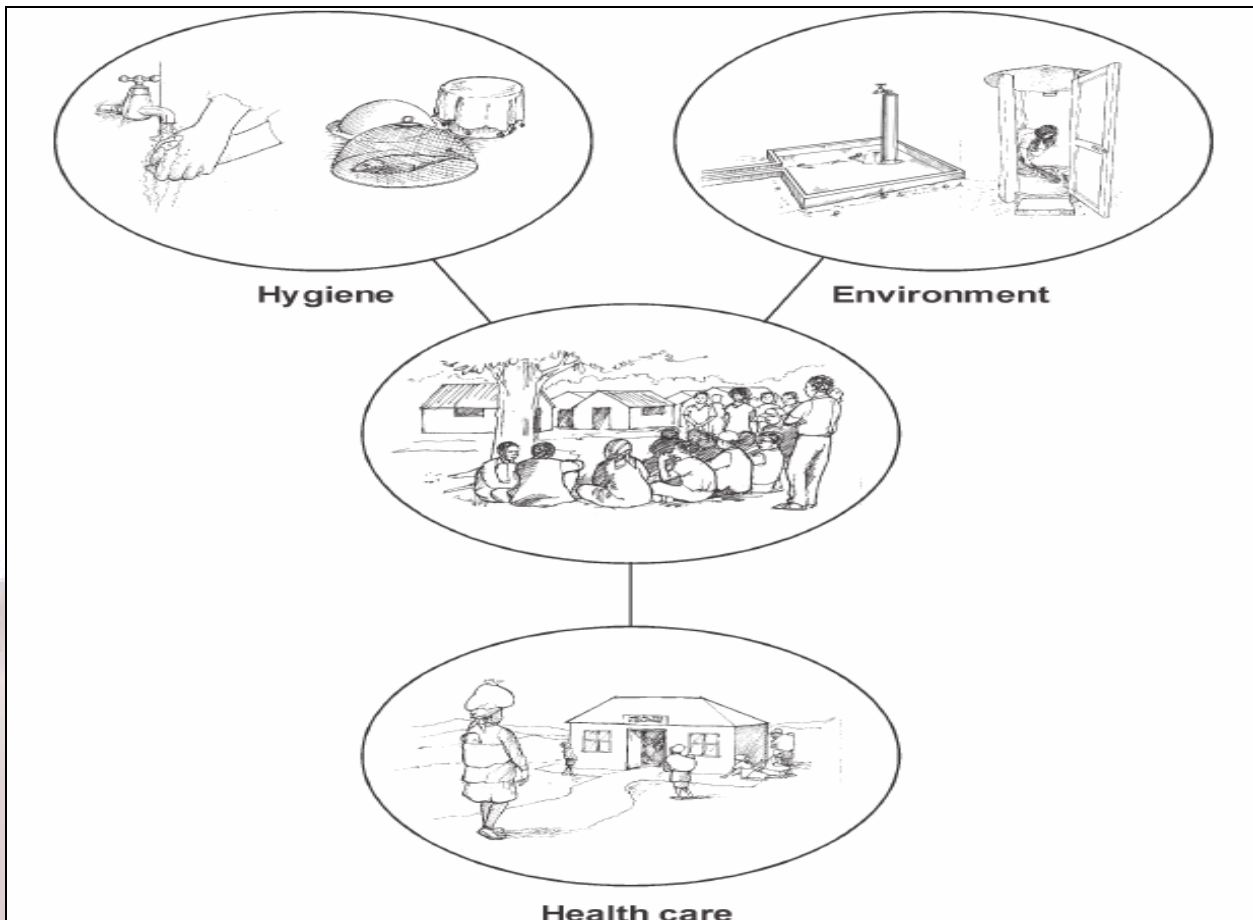

- ❖ Introduction
- ❖ Health & Hygiene Status of Delhi: Urban Slums and Villages
- ❖ Present Scenario
- ❖ List of Delhi Urban Slums and Villages
  - \* Pandwala Khurd
  - \* Pappankalan, Dwarka
  - \* Durga Park, Nasirpur, Dwarka
  - \* Hasanpur
  - \* Prayog Vihar, Hari Nagar
- ❖ Activities:
  - \* Safe Hygiene Practices
  - \* Sanitation Provision & facilities
  - \* Safe Drinking Water
  - \* Training & Awareness Programme
  - \* Health Checks
  - \* Establishment of H&H (Health & Hygiene) Sub Centre
  - \* Eye Camp
- ❖ Road Ahead

Availability of basic civic facilities, like potable water, water disposal and sanitation, are vital human needs for health and efficiency of human beings. Inability of the city management and city institutions to provide their facilities to their citizens leads to high incidence of diseases and mortality rates. The problems which the women and children face in these conditions are much worse. An analysis of the performance of various “total environment schemes” in the country carried out by the Planning Commission, Government of India, brings out that sanitation programme has not been pursued in an integrated manner. It has not been provided as an integrated service which includes availability of water, waste water disposal, women welfare, primary healthcare etc. The analysis also brings out that there was a wide gap between provision for safe disposal of waste and drinking water supply.

On assessment by various organizations, it has been found that available situation in the villages/urban slums in sanitation and water supply is not satisfactory. Location, distance, water source, time to travel, facilities to clean water and cost involved are some important components.

Open defecation alone is responsible for many diseases. Over more than 50 infections have been found due to open defecation. Around 80% of all ill people's disease is transferred to healthy ones through human excreta and unsafe drinking water.

Source: WHO, *Healthy Villages - A guide for communities and community health workers*, 2002

Sanitation plays an important role in developing various diseases. As such the incidence of disease can be minimized if proper action is taken. It is important to know how many diseases are caused by insanitation and unsafe disposal of various type of waste.

#### DISEASES DUE TO INSANITATION:

##### By Bacteria

- ❖ Cholera
- ❖ Diarrhea
- ❖ Bacillary dysentery
- ❖ Typhoid and Para Typhoid

##### By Protozoa

- ❖ Amoebic Dysentery

#### By Virus

- ❖ Inf. Hepatitis.
- ❖ Poliomyelitis

#### By Intestinal Worms

- ❖ Hookworm
- ❖ Round worm
- ❖ Thread worm
- ❖ Tape worm

#### By Polluted Air

- ❖ Eye diseases
- ❖ Respiratory diseases
- ❖ Skin and hair problems.

#### By Liquid Waste and Stagnant Water

- ❖ Malaria
- ❖ Kalazar
- ❖ Filaria
- ❖ Dengue
- ❖ Japanese encephalitis
- ❖ Skin disease.
- ❖ Eye problems.

#### By Airborne micro organism

- ❖ Chicken Pox
- ❖ Measles
- ❖ Diphtheria
- ❖ Pneumonia
- ❖ Whooping Cough
- ❖ T.B
- ❖ Mumps etc.

The following parameters have been drawn up to identify the poorest of the poor in rural set up and urban slum.

- ❖ Annual income of household family
  - Living conditions

- Roof
- Floor
- Access to water
- Access to sanitation
  - Level of education of one illiterate person in the family.
  - Low food purchasing power and low consumption
  - Type of employment
  - Status of children in the household
  - Child below 14 years who is forced to work.
  - Family with two or more girl children
  - Prevalence of alcoholism / drug addiction / other abuses resulting in depleting income for the family.

### NUTRITIONAL DEFICIENCY

- ❖ Lack of fair price shops.
- ❖ Lack of awareness and knowledge about nutrition.
- ❖ Limited income to pay for food, vegetable, fruit etc.

### EDUCATIONAL PROBLEMS OF CHILDREN

- ❖ Lack of school in the neighborhood.
- ❖ Overcrowding in school.
- ❖ No follow up on dropout children.
- ❖ Inability to pay for transport.

### SPECIAL PROBLEMS OF GIRL CHILD GIVEN SECONDARY STATUS

- ❖ Neglect of girl child.
- ❖ Low priority for education of girl children.
- ❖ Relatively more work and longer work hours.
- ❖ Load of compulsory primary education.

### CHILD LABOUR

- ❖ Family needs financial support.
- ❖ Higher ratio of school dropouts.
- ❖ Sexual exploitation by employers.
- ❖ Economy exploitation.

### WOMEN EMPOWERMENT ISSUES

- ❖ Lack of awareness regarding its benefits.
- ❖ Different groups and lack of faith.

- ❖ Lack of participation among themselves.
- ❖ Lack of thrift and credit schemes and difficulty in maintaining account.

### UNEMPLOYMENT

- ❖ Lack of education.
- ❖ Lack of specialized training centers.
- ❖ Lack of employment opportunity.

### INCONSISTENCY IN PARTICIPATION

- ❖ Differences due to caste, creed.
- ❖ Group conflicts.
- ❖ Low self esteem
- ❖ Distrust
- ❖ Reluctance
- ❖ To take risk
- ❖ Sense of powerlessness
- ❖ Lack of skills in planning and problem solving.

### VICIOUS CIRCLE OF POVERTY

## THE SEQUENCING OF ACTION PLAN IN RURAL AND URBAN SET UP WILL BE:

- ❖ Benchmark Survey of various components of the village and urban slums.
- ❖ Identification of need and resources.
- ❖ Infrastructure building for execution of Programme.
- ❖ Mobilization of resources.
- ❖ Planning of Programme in sequencing.
- ❖ Implementation.
- ❖ Review and Analysis.
- ❖ Modification in Programme if any.
- ❖ Recommendation of Programme – Present and Future.
- ❖ Presentation of work done leading to situation analysis.
- ❖ Phasing out Activities.

## HEALTH IMPACTS AND DETERMINANTS

The health impact assessment approach is grounded in the broad determinants of human health. These are defined as the personal, social, cultural, economic, and environmental factors that influence the health status of individuals and populations. Some factors that affect health, such as age, sex and the gender people inherit cannot be changed. However, policies, programme, and the way they are implemented represent important influences on people's health and wellbeing.

To understand the health impacts, there is a need to consider all the health determinants that may be affected by the proposed policy, programme or other development. Two broad groups of determinants are particularly important, namely the bio- physical environment and the socio – economic environment. The following table given principal categories of health determinants. As such in this context, health determinants are very important.

## EVALUATION OF VARIOUS PROGRAMMES BY COMPARING CARDINAL PARAMETERS IN RURAL SET UP AND URBAN SLUMS

SURVEY RESULT LEADING TO VARIOUS ACTIVITIES: Sanitation, health, hygiene, and community development programme.

SPECIAL MEDICARE SCHEME: We are developing “Special Mini health care centre” run by trained local female health worker. She will be trained to provide first aid treatment and take up minor injuries and distribute medicines and materials for dressing multi vitamin, Bandage, chlorine tablet, ORS powder, Tetvac and fersolet etc. This is a new approach and we recommend it strongly. The fund and resources will be provided by the project and also get help from Government (State and Central) and other funding agencies.

Referral System: Treatment will be more effective by developing *referral centre* where different type of cases can be referred to various adjoining centre for better treatment.

For example: Sub health centre → medical centre and other practice or in the neighborhood → Sub division medical centre → District hospital → Medical college centre, Hospital and other Health specialized centre. This will be an effective step.

*COMMUNITY PARTICIPATION: Not just awareness and training but also the active involvement of the community is essential to active cost effective healthcare. Involvement of women’s organization, NGO’s and School teachers and children is an essential step towards generating awareness that can bring about changes in hygiene & sanitation of the community. Steps should also be taken to introduce some chapter on hygiene, sanitation, safe drinking water and healthcare in the school. This would have a direct impact on the impressionable minds of children and they will follow it through out their life.*

# VILLAGE PANDWALA

PANDWALA, KHURD VILLAGE, NAZAFGARH, DELHI

## Statistical Report: DELHI

Pandwala Khurd, Najafgarh

TOTAL HOUSE	338
TOTAL POPULATION	1696
MALE	908
FEMALE	788

### AGE WISE POPULATON:

O-1 YEAR	30

#### OTHER ACTIVITIES BEING TAKEN UP SOON

- ❖ FAMILY MEDICAL FOLDER COVERING FAMILIES IN 338 HOUSES.
- ❖ FOLLOW UP ANC PROGRAMME WITH SAFE DELIVERY AND INFANT CARE.
- ❖ HEALTH CARE AND DEVELOPMENT PROGRAMME FOR ADOLESCENT GIRL.
- ❖ VOCATIONAL TRAINING PROGRAMME FOR SELF HELP GROUP INCLUDES FOOD PROCESSES, TAILORING, EMBROIDERY, AND BEAUTY CULTURE ETC.
- ❖ TRAINING ON HYGIENIC PRACTICES.
- ❖ STARTING VILLAGE LIBRARY.
- ❖ STARTING YOUTH CLUB FOR BOY AND GIRL.
- ❖ DEVELOPING MICRO CREDIT SYSTEM.
- ❖ CONSTRUCTION OF HOUSE HOLD OF TWO PIT AND SAFE DRINKING WATER.
- ❖ ADULT LITERACY PROGRAMME ETC.

The existing status of urban slum and rural set up said cannot to be satisfactory. Total health care concept on health, hygiene, sanitation, safe drinking water and promoting awareness programme on environment sanitation can be replicable elsewhere. We have interlinked toilet technology with total health care concept to bring about change in urban slums. We have mentioned working result of various urban slums which can be treated as a model.

## QUICK FACTS

- ❖ 42% of the world's populations – 2.6 billion have no safe place to go to the toilet.
- ❖ A child dies every 15 seconds from diarrhea caused largely by poor sanitation and water supply.
- ❖ The Lancet medical journal reports that diarrhea diseases are the greatest single killer of children in poor countries.
- ❖ The Millennium Development Goals include the target to halve the proportion of people without sanitation by 2015.
- ❖ This target is itself only a step on the road to universal access. Even if it is achieved there will still be 1.8 billion people – one in four of the world's population at that time without any safe place to go to the toilet.
- ❖ At the current rate of progress the global target will not be met until 2026 – 11 years too late.
- ❖ This will result in the deaths of an extra 10 million children.
- ❖ Had they lived these children could have contributed \$61 billion to their countries' economies.
- ❖ 443 million school days are lost annually worldwide due to diarrhea disease.
- ❖ In sub-Saharan Africa, at the current rate of progress, the sanitation target will not be met until 2105 – resulting in the deaths of an extra 133 million African children.
- ❖ The additional cost to Africa of these children's lives would be \$1.7 trillion (\$69 billion in today's money).
- ❖ The MDGs apply to individual countries. Zambia will not meet its sanitation MDG until 2130.
- ❖ 384,000 people need to gain access to sanitation every day to reach the MDG targets – a 90% increase on performance in the 1990s.
- ❖ The Global Water Partnership (GWP) calculated that only \$1 billion was being spent on sanitation per year in developing countries.
- ❖ The GWP also stated that annual spending on water and sanitation needs to double from \$14 billion to \$30 billion to reach the MDGs with all the extra money being spent on sanitation.
- ❖ The World Health Organization has estimated that the failure to invest in the water and sanitation MDGs will cost developing countries \$84 billion per year in lost lives, low productivity of sick workers, increased health system costs, and education provision wasted on children absent because of water hauling work or ill-health.
